

FINAL-YEAR
INTERNSHIP 2027

Portfolio by
Wissal El Bekkali

JUNIOR CYBERSECURITY ANALYST

Portfolio

SOC · Detection · Compliance

FINAL-YEAR INTERNSHIP

6

months

AVAILABLE FROM

Jan 2027

TARGET ROLE

Junior Cybersecurity Analyst, SOC and detection

CONTACT

Témara, Morocco · October 2026

Monitor
Detect
Respond

Career objective

OBJECTIVE

Join a SOC team as a junior cybersecurity analyst to monitor, analyze and handle incidents, then grow toward detection engineering or penetration testing.

2

internships in summer 2026

6

organizational domains tested

99%+

ML detection recall on live traffic

The offer: missions and my achievements

MISSION

Assist with SOC monitoring

Deployed a Wazuh SIEM that centralizes and correlates network, Windows and Linux logs (YaneCode Digital, summer 2026).

Done

MISSION

Incident detection, analysis and response

Rules for brute force, privilege escalation, network scans and data exfiltration, each validated with simulated attacks. Suricata rules on a C2 lab. ML layer with over 99% recall.

Done

MISSION

Vulnerability assessment and fixes

External black-box penetration tests on 6 domains (IFGICT): outdated CMS, misconfigured FTP, SPF/DNS errors. Findings by severity and a remediation plan.

Done

MISSION

Maintain security documentation

Reports in French and English: executive summary, severity-rated findings, remediation roadmap, for technical and management readers.

Done

The offer: the profile sought and my evidence

TOOLS	**SIEM, IDS/IPS, Wireshark**	SIEM: Wazuh. IDS/IPS: Suricata, Zeek. Network analysis: Wireshark. Vulnerabilities: Nmap, Burp Suite.	**Practiced**
PROFILE	**Network protocols and security concepts**	TCP/IP, VLAN, firewalls, GNS3 lab (Kali, Windows, Ubuntu), SSH hardening, PAM, fail2ban.	**Practiced**
ASSET	**ISO 27001 and continuous training**	NIST CSF 2.0 vs ISO/IEC 27001:2022 comparison with control mapping. Certifications: Ethical Hacker (Cisco), Palo Alto Networks, Red Hat RH124 and RH134, AWS Academy.	**In progress**
GROWTH	**PenTester or SOC Engineer**	Both profiles are in my background: penetration testing and OSINT on one side, detection engineering (Sigma, Suricata, ML) on the other.	**Done**

#1 YaneCode Digital

Cybersecurity Intern, SIEM and AI/ML Detection | Jul. – Aug. 2026

Goal: centralize security logs and detect common attacks.

Wazuh SIEM deployment

1

Collection and correlation of network, Windows and Linux logs.

Detection rules

2

Brute force, privilege escalation, network scans, data exfiltration. Each rule is tested with a simulated attack.

Machine learning layer

3

Detection model exposed through a dedicated prediction interface.

99%+

recall of the ML detection layer on live traffic

4

attack types covered by detection rules

#2 IFGICT

Cybersecurity Intern | Jun. – Aug. 2026

6

organizational domains assessed with external black-box tests

Pentest and OSINT

Nmap, Whois, Dig, curl, certificate transparency logs.

Findings

Outdated CMS versions, misconfigured FTP services, SPF/DNS errors, end-of-life software.

Reports in FR/EN

Executive summary, severity-rated findings, remediation roadmap.

Compliance

NIST CSF 2.0 vs ISO/IEC 27001:2022: control mapping and a cloud-native framework.

#1 C2 Lab and Attack Detection

A Command & Control lab built on GNS3 simulates two attacks, then detects both in real time. Same cycle as a SOC analyst: attack, observe, detect.

01

ATTACK

Kali Linux launches a Meterpreter backdoor and a TCP reverse shell.

02

TARGETS

Windows 7 and Ubuntu machines inside the GNS3 network.

03

CAPTURE

Traffic captured and analyzed with Wireshark.

04

DETECT

Custom Suricata rules flag both attacks in real time.

GNS3 · Kali Linux · Windows 7 · Ubuntu · Meterpreter · Wireshark · Suricata

More projects

SYSTEMS

Operating System Security Lab

Enterprise-style environment (Ubuntu, Windows Server, Kali) for SSH brute-force testing, log analysis, vulnerability identification and system hardening.

Ubuntu · Windows Server · Kali

WEB APPLICATION

Web Application Penetration Testing

Tested authentication weaknesses and planned remediation with Burp Suite and Hydra.

Burp Suite · Hydra

AI

AI-Based Exam Grading System

Full-stack web application (PHP, Python) using an LLM and a RAG pipeline to grade open-ended answers.

PHP · Python · LLM · RAG

Skills, organized by the job offer

SOC and SIEM

Wazuh, Sigma rules, detection engineering, Filebeat, Winlogbeat

IDS/IPS and networking

Suricata, Zeek, Wireshark, TCP/IP, VLANs, firewalls, GNS3

Vulnerabilities and testing

Penetration testing, OSINT, Nmap, Burp Suite, Hydra, Metasploit

Governance

NIST CSF 2.0, ISO/IEC 27001:2022, control mapping, report and roadmap writing

AI for security

Scikit-learn, XGBoost, Isolation Forest, Random Forest, Streamlit

Systems and languages

Kali Linux, RHEL, Ubuntu Server, Windows Server, Python, Java, C, PHP, JavaScript, Git

Education and certifications

Sep. 2025 - Jun. 2027	**Cybersecurity Engineering Degree, Final Year** Université Internationale de Rabat (UIR)
2022 - Jun. 2025	**Bachelor's Degree in Mathematics & Computer Science (SMI)** Faculty of Sciences, Rabat
2022	**Baccalaureate, Mathematical Sciences A** Lycée Abdallah Chefchaouni, Témara

Certifications

- Red Hat System Administration I (RH124) and II (RH134)
- Cybersecurity Foundation, Palo Alto Networks
- Ethical Hacker, Cisco Networking Academy
- Pre-Security Path, TryHackMe
- AWS Academy Graduate, Cloud Foundations (Oct. 2026)

Languages

Arabic: native | French: fluent (C1)

English: professional (B2/C1)

Thank you

Wissal El Bekkali | Junior Cybersecurity Analyst

Available from January 2027 | Open to Morocco and other countries
